

**Key Features**

**High Power with Small Size for Space Saving**

**Excellent Long Term Stability**

**Complete Flameproof Construction**

**Controlled Temperature Capability**

**Solvent Resistant Coat and Code**

**Special Lead Formations Possible**

**Type ROX Series**

The resistive element comprises a metal oxide film deposited on a ceramic former. The element is protected by a flameproof coating which will withstand overload conditions without flame or mechanical damage. They are recommended for use in applications such as line protection etc

**Characteristics – Electrical**

| Type        | Rated Power @ 70°C | Max. Working Voltage | Max. Overload Voltage | Dielectric Withstand Voltage | Resistance Range Ω | Operating Temp. Range |           |
|-------------|--------------------|----------------------|-----------------------|------------------------------|--------------------|-----------------------|-----------|
| Normal Size | ROX025             | 0.25W                | 250V                  | 400V                         | 250V               | 0.3 ~ 50K             | -55~130°C |
|             | ROX05              | 0.5W                 | 250V                  | 400V                         | 250V               | 0.3 ~ 50K             |           |
|             | ROX1               | 1W                   | 350V                  | 600V                         | 350V               | 0.1 ~ 50K             |           |
|             | ROX2               | 2W                   | 350V                  | 600V                         | 350V               | 0.1 ~ 50K             | -55~200°C |
|             | ROX3               | 3W                   | 500V                  | 800V                         | 500V               | 5.0 ~ 100K            |           |
|             | ROX5               | 5W                   | 750V                  | 1000V                        | 750V               | 5.0 ~ 150K            |           |

Resistors shall have a rated direct-current (DC) continuous working voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial line frequency and waveform corresponding to the power rating , as determined from the following formula :

$$RCWV = \sqrt{P \times R}$$

Where : RCWV = Rated DC or RMS AC continuous working voltage at commercial-line frequency and waveform (volt)

P = Power Rating (watt)

R = Nominal Resistance (ohm)

Rated Voltage = RCWV or Max. Working Voltage, whichever is smaller

### Environmental Characteristics

### Derating:

In ambient temperatures greater than 70°C the load shall de-rate as shown in the graph below:

**Painting method:**

Welding point, terminal and lead wire, is permissible to be exposed without the outer coated cover. The extent should be within 1/2 of the resistor body diameter.

**Marking:**

For 1/4W, 1/2W, 1W, 2W, 3W, 4W, 5W and all of small size Resistors shall be marked with color coding. colors shall be in accordance with JIS C 0802

For 7W, 8W, 9W marking shall be in text format:

Code description and regulation

1. Wattage rating.
2. Nominal resistance value.
3. Resistance Tolerance.

G: ± 2 %

J: ± 5 %

K: ± 10 %

## Environment Related Substance

This product complies to EU RoHS directive, EU PAHs directive, EU PFOS directive and Halogen free Ozone layer depleting substances.

Ozone depleting substances are not used in our manufacturing process of this product. This product is not manufactured using Chloro fluorocarbons (CFCs), Hydrochlorofluorocarbons (HCFCs), Hydrobromofluorocarbons (HBFCs) or other ozone depleting substances in any phase of the manufacturing process.

## Storage Condition

The performance of these products, including the solderability, is guaranteed for a year from the date of arrival at your company, provided that they remain packed as they were when delivered and stored at a temperature of 25°C ± 10°C and a relative humidity of 60%RH ± 10%RH, chemical and dust free atmosphere

Even within the above guarantee periods, do not store these products in the following conditions. Otherwise, their electrical performance and/or solderability may be deteriorated, and the packaging materials (e.g. taping materials) may be deformed or deteriorated, resulting in mounting failures.

1. In salty air or in air with a high concentration of corrosive gas, such as Cl<sub>2</sub>, H<sub>2</sub>S, NH<sub>3</sub>, SO<sub>2</sub>, or NO<sub>2</sub>
2. In direct sunlight
