RT8DN

0–45° TO 0–200 TURNS • DEVICENET®

Industrial Grade Rotational Position Sensor Absolute Rotary Position up to 200 turns Aluminum or Stainless Steel Enclosure Options IP68 / NEMA 6

2.5" [64 mm]   4.0" [102 mm]

Our model RT8DN communicates rotational position feedback via DeviceNET® to your programmable controller. The heart of this sensor is a precision plastic-hybrid position potentiometer which provides an "absolute" position and does not ever have to be reset to a "home" position after a power loss or planned shutdown.

This innovative sensor from Celesco, designed to meet tough NEMA-4 and IP67 environmental standards, is available in full-stroke measurement ranges of 1/8 to 200 turns.

Output Signal

General

Full Stroke Range	0-0.125 to 0-200 turns
Electrical Interface	CANbus ISO 11898
Protocol	DeviceNet Version 2.0
Accuracy	see ordering information
Repeatability	± 0.02% full stroke
Resolution	± 0.003% full stroke
Enclosure Material Options	powder-painted aluminum or stainless steel
Sensor	plastic-hybrid precision potentiometer
Potentiometer Cycle Life	see ordering information
Shaft Loading	up to 10 lbs. radial and 5 lbs. axial
Starting Torque (25ºC)	2.0 in-oz., max.
Weight, Aluminum (Stainless Steel) Enclosure	3 lbs. (6 lbs.) max.

Electrical

|	
Input Voltage	Bus Powered
Input Current	40 mA max.
Address Setting (Node ID)	0...63 set via DIP Switches (default setting: 63)
Baud Rate	125K, 250K or 500K set via DIP Switches
EDS file	available @ http:/celesco.com/downloads

Environmental

Enclosure	NEMA 4/4X/6, IP 67/68
Operating Temperature	-40° to 200°F (-40° to 90°C)
Vibration	up to 10 g to 2000 Hz maximum

I/O Format

Data Frame

Interframe Space	Start of Frame	Identifier	RTR Bit	Control Field	Data Field	CRC Sequence	CRC Delimiter	Ack Slot	Ack Delimiter	End of Frame	Interframe Space
1 bit	11 bits	1 bit	6 bits	0-8 bytes		15 bits	1 bit	1 bit	1 bit	7 bits	3 bits

Data Field

Not Used		Not Used		Full Stroke Range**		Current Measurement Count*	
B_7	B_6	B_5	B_4	B_3	B_2	B_1	B_0

B_0 = LSB current measurement byte B_2 = LSB full stroke range byte B_4 – B_7 = not used
B_1 = MSB current measurement byte B_3 = MSB full stroke range byte

---

*Current Measurement Count

The **C**urrent **M**easurement **C**ount (**CMC**) is the output data that indicates the present position of the measuring cable.

The CMC is a 16-bit value that occupies the first two bytes (B_0 and B_1) of the data field. B_0 is the LSB (least significant byte) and B_1 is the MSB (most significant byte).

The CMC starts at 0000H with shaft at the full counter-clockwise position (0° reference mark) and continues in the clockwise direction to the end of the stroke range stopping at FFFFH. This holds true for all ranges.

**Full Stroke Range

The **F**ull **S**troke **R**ange (**FSR**) is a 16-bit value in the data field that expresses the full range of the sensor in degrees. This value can be used to convert the actual count to units of measurement should the application require it.

The full stroke measurement range occupies the second two bytes (B_2 and B_3) of the data field.

B_2 is the LSB (least significant byte) and B_3 is the MSB (most significant byte).

This value is expressed in degrees.

Example:

Hex Value	Decimal Equivalent	Full Stroke Range
0168	360	360 degrees

Converting CMC to Degrees

If required, the CMC can easily be converted to a rotational measurement expressed in degrees instead of counts.

This is accomplished by first dividing the CMC by 65,535 (total counts over the range) and then multiplying that value by the FSR:

$$\left(\frac{CMC}{65,535} \right) \times FSR$$

Example:

If the full stroke range is **1 turn (360 degrees)** and the current position is **0FF2 Hex** (4082 Decimal) then,

$$\left(\frac{4082}{65,535} \right) \times 360 \text{ deg.} = 22.4 \text{ degrees}$$

Address Setting (Node ID), Baud Rate and Bus Termination Settings

Address Setting (Node ID)

The Address Setting (Node ID) is set via 6 switches located on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

The DIP switch settings are binary starting with switch number 1 (= 2^0) and ending with switch number 6 (= 2^5).

DIP-1 (2^0)	DIP-2 (2^1)	DIP-3 (2^2)	DIP-4 (2^3)	DIP-5 (2^4)	DIP-6 (2^5)	address (decimal)
0	0	0	0	0	0	0
1	0	0	0	0	0	1
0	1	0	0	0	0	2
...	...	...	...	...	...	...
1	1	1	1	1	1	63

↑ = "0" ↓ = "1"

Baud Rate

The transmission baud rate may be either factory preset at the time of order or set manually at the time of installation.
The baud rate can be set using switches 7 & 8 on the 8-pole DIP switch found on the DeviceNET controller board located inside the transducer.

| DIP-7	DIP-8	baud rate
0	0	125k
1	0	250k
0	1	500k
1	1	125k

↑ = "0" ↓ = "1"

Bus Termination

The setting of the internal bus termination resistor may be specified upon order or manually changed by the end user at the time of installation.

The bus termination resistor is activated setting switches 1 & 2 on the 2-pole DIP switch (located on the internal DeviceNET controller board) to the "ON" position.

↑ = "ON" (resistor active)
↓ = "OFF" (resistor not active)
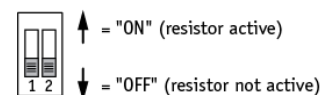

DeviceNET Controller Board and DIP Switch Location
