Issued: 10-24-86 Revised: 12-15-86

## <u>D E S C R I P T I O N</u>

## PRODUCT COVERED:

Component Connectors, Series Multi-Tap.

## GENERAL:

These devices are multi-pole connectors employing contacts of the crimp, solder and screw termination type for use in electrical equipment where the acceptability of the combinations is determined by Underwriters Laboratories Inc.

## ENGINEERING CONSIDERATIONS (NOT FOR INSPECTOR USE):

<u>Use</u> - For use only in complete equipment where the acceptability of the combination is determined by Underwriters Laboratories Inc.

Conditions of Acceptability - In order to be judged acceptable as a component of electrical equipment, the following conditions should be met.

- 1. These devices should be used only where they will not interrupt the current.
  - 2. These devices have not been tested for current-carrying capability.
- 3. The suitability of the mounting means shall be determined in the end use.
- 4. The placement of these devices within the equipment enclosure should be such that spacings between the live parts and the equipment are suitable for the particular application.
- 5. The adjacent poles may be used at potentials not exceeding 600 V based on the spacings requirements of Paragraph 12.1 of UL 498.
- 6. The electrical and mechanical contact between the connector and the printed wiring board is to be judged in the end-use equipment.
- 7. The factory assembled contacts have been investigated for the following wire ranges and maximum tensile forces:

Part No.	Wire Range (AWG)	( <u>Tensile Force (lb)</u>
172751-1	14	20
172757-1	28	6.6

- 8. The suitability of the insulating materials used in the molded bodies shall be judged in the end-use equipment.
- 9. The operating temperature of these devices should not exceed the temperature ratings of the insulating materials. These materials may be used interchangeably at a maximum temperature of  $130\,^{\circ}\text{C}$ . R.R.
