TE Connectivity Earns Cummins Category Partner Award for Superior Service, Quality and Value

Recognition centers on high-performance under-valve cover harness for harsh conditions

BERWYN, Pa. – July 25, 2017 – TE Connectivity Ltd. (NYSE: TEL) (TE), a world leader in connectivity and sensors, today announced that it received the Category Partner award from [Cummins](#) Inc. (NYSE: CMI) for superior service, quality and value. TE was recognized specifically for its high-performance under-valve cover harness, or injector head harness, designed for harsh conditions.

Launched in 2016, the Cummins Category Partner award recognizes overall supplier performance and commitment to deliver value. Only about eight percent of current Cummins suppliers are named in the Category Partner List (CPL), which is critical for future collaboration and growth.

TE's harness solution includes Raychem wire to safely deliver power to fuel injectors as well as other TE products that can endure high heat, oil and vibration. The harness is used in Cummins' 12- and 15-liter heavy duty diesel and natural gas engines for on-highway vehicles in North America.

"We are honored to receive this coveted award from Cummins," said Aaron Stucki, senior vice president and general manager of TE's Industrial & Commercial Transportation business. "Cummins engines are known for high-quality, performance and extraordinary reliability and because of this, it was critical to design a reliable solution where failure is not an option. This award is a result of our close collaboration to deliver a robust and rugged product for the ever-evolving requirements of heavy duty commercial vehicles."

TE offers a complete, harsh portfolio for the truck and bus, construction and agriculture, recreation and marine, and two-wheeler markets. Products include everything from terminals, connectors, relays and contactors to wire, cable assemblies, sensors, and hybrid and electric mobility solutions.

Cummins is a leading global technology company that provides a wide range of diesel and alternative fuel engines and electrical generator sets, as well as related components and technologies.
