RoHS 2 TECHNICAL FILE

PN: 2073244-1

Form: PC120712-01

Version 7 - 18 December 2012

CONTENT

•This technical file contains following sections :

1. PRODUCT IDENTIFICATION

- description
- list of components
- list of suppliers
- applicable EEE category
- applicable exemptions
- picture (optional)

2. RISK ASSESSMENT

- risk assessment methodology
- material risk
- supplier risk
- part noncompliance risk
- recommended level of technical documentation

3. EVALUATION

- evaluation of documentation
- evaluation criteria
- compliancy confirmation

4. REFERENCES

- International Standards
- EU documents
- TE Connectivity documents

5. OVERVIEW TABLE

1. PRODUCT IDENTIFICATION

DESCRIPTION

product group **CCAO Mobile & Consumer Electronics**
type
serial number
batch
part number(s) **2073244-1**
part description **patchcord 8p4c**

LIST OF COMPONENTS

All components are listed in the overview table of this technical file.

LIST OF SUPPLIERS

All suppliers are listed in the overview table of this technical file.

APPLICABLE EEE CATEGORY

3. IT and Telecommunications Equipment

APPLICABLE EXEMPTIONS (if any)

PICTURE (optional)

2. RISK ASSESSMENT

RISK ASSESSMENT METHODOLOGY

MATERIAL RISK

- All TE Connectivity parts are categorized in commodity codes. All these commodity codes were evaluated by an internal material expert team and assigned a LOW-MEDIUM-HIGH material risk.
- This LOW-MEDIUM-HIGH material risk evaluation is documented in the overview table of this technical file.
- Business Units (BU) have the opportunity to override this default material risk, based on :
 - BU specific implementation of TE's corporate compliance validation specification TEC-138-703
 - or BU specific compliance procedures
 - or detailed material knowledge of the evaluated component.
- Requirements for BU override of material risk :
 - although BU specific assessment procedures and scoring systems may differ, in the end all scores are to be transferred to a LOW-MEDIUM-HIGH material risk evaluation that can be documented in the overview table
 - any material risk override needs to be explained by a comment in the overview table.

SUPPLIER RISK

- All TE Connectivity suppliers are assigned a LOW-MEDIUM-HIGH supplier risk, using several measurement criteria as indicators for supplier's capabilities to manage hazardous substance content of their products.
- This LOW-MEDIUM-HIGH supplier risk evaluation is documented in the overview table of this technical file.
- Business Units (BU) have the opportunity to override this default supplier risk, based on :
 - BU specific implementation of TE's corporate compliance validation specification TEC-138-703
 - or BU specific compliance procedures
 - or available supplier audit results
- Requirements for BU override of supplier risk :
 - although BU specific assessment procedures and scoring systems may differ, in the end all scores are to be transferred to a LOW-MEDIUM-HIGH supplier risk evaluation that can be documented in the overview table
 - any supplier risk override needs to be explained by a comment in the overview table.

PART NONCOMPLIANCE RISK

- The PART NONCOMPLIANCE RISK combines the material risk evaluation and the supplier risk evaluation into an overall LOW-MEDIUM-HIGH part noncompliance risk ranking.
- The material risk is the main driving factor for the PART NONCOMPLIANCE RISK, with a beneficial influence for trustworthy suppliers.

PART NONCOMPLIANCE RISK		SUPPLIER RISK			
		LOW	MEDIUM	HIGH	
MATERIAL RISK	LOW	⇒	LOW	LOW	LOW
	MEDIUM	⇒	LOW	MEDIUM	MEDIUM
	HIGH	⇒	LOW	MEDIUM	HIGH

RECOMMENDED LEVEL OF TECHNICAL DOCUMENTATION

- The different levels of the PART NONCOMPLIANCE RISK (low-medium-high) determine the RECOMMENDED LEVEL of TECHNICAL DOCUMENTATION to be established for documenting the part's compliance with the RoHS substance restrictions :
 - LOW part noncompliance risk : - generic supplier Statement of Compliance (SoC)
 - MEDIUM part noncompliance risk : - part specific supplier Statement of Compliance (SoC)
 - HIGH part noncompliance risk : - supplier Material Declaration (MD)

or

 - test report
- The recommended technical documentation for every part is documented in the overview table of this technical file.

RECOMMENDED MINIMUM DOCUMENTATION LEVEL		SUPPLIER RISK			
		LOW	MEDIUM	HIGH	
MATERIAL RISK	LOW	⇒	Generic Supplier Compliance Response	Generic Supplier Compliance Response	Generic Supplier Compliance Response
	MEDIUM	⇒	Generic Supplier Compliance Response	Part Specific Supplier Response	Part Specific Supplier Response
	HIGH	⇒	Generic Supplier Compliance Response	Part Specific Supplier Response	Supplier Material Declaration <i>or</i> Test Report - supplier - TE internal - 3rd party

3. EVALUATION

EVALUATION OF DOCUMENTATION

- All technical documentation needs to be evaluated whether :
 - the document is of sufficient quality to be used, and
 - actually confirms the required compliancy with the substance restrictions of RoHS2.

EVALUATION CRITERIA

- Following is a non-exhaustive list of criteria to take into account for the evaluation of supplier answers and/or test reports :
 - clear identification of supplier or test lab / letterhead
 - date of answer/test report
 - location of test lab and name of tester
 - clear product identification
 - applicable legislation stated
 - analytical test method used for the test
 - ISO 17025 certification of test lab
 - description of the conclusion of the testing / confirmation that all results do meet the substance restrictions limits
 - no unacceptable waiver statements
 - contact for further information
 - signature

COMPLIANCY CONFIRMATION

- For each component, the result of this compliancy check is documented, by including the following information in the overview table :
 - result of the quality/compliance check (Compliant or Not OK)
 - name of the evaluator who performed the quality/compliancy check
 - date of the quality/compliancy check
