

# RAYCHEM TUBING PRODUCTS

Versatile Raychem brand heat-shrinkable tubing products will cover just about all your needs. With high-performance tubing from TE Connectivity, you can insulate, cover, protect, bundle, strain-relieve, seal, identify, beautify and otherwise take care of a broad range of projects.

Single wall tubing gives optimum flexibility and space savings along with mechanical protection and chemical resistance. Dual wall tubing, with inner walls of adhesive or encapsulant, also reliably seals out moisture. Elastomeric tubing products are specifically designed for use in applications where resistance to abrasion, chemicals and other fluids, and flexibility over a wide range of temperatures is required. Heavy duty tubing products are intended for use in the most rugged environments. Whether your application is commercial, industrial, or military, there are Raychem brand tubing products to meet your precise needs.

Part numbers in this Selection Guide are RoHS and REACH Compliant. These products comply with European Union Directive 2002/95/EC, as amended 1 January 2006, that restricts the use of lead, mercury, cadmium, hexavalent chromium, PBB and PBDE in certain electrical and electronic products sold into the EU as of 1 July 2006.

## ELECTRICAL INSULATION/STRAIN RELIEF/FLAME-RETARDANCE

General-purpose polyolefin tubing is widely used to provide insulation and strain relief of wire terminations and connections, plus a variety of other applications.

- The tubing is cost effective, and with its low shrink temperature, installs quickly
- It is flexible but does not easily wrinkle when bent
- Flame-retardant tubing is available in a wide range of sizes and colors
- Flame-retardant types are offered in both standard and low toxicity Zero Halogen versions
- Most polyolefin tubing products meet UL and CSA standards for a wide range of commercial applications as well as military specifications

## WIRE BUNDLING AND ORGANIZATION

Raychem single wall tubing products allow you to bundle wires to create very flexible, lightweight harnesses that can stand up to harsh environments. Raychem elastomeric tubings are intended for use in the most rugged harnessing applications where abrasion and temperature resistance as well as resistance to chemicals and fluids are required.

- The broad range of tubing products in the Raychem line ensures that the appropriate solution to your wire bundling and harnessing requirements will be available
- A variety of tubing products meet military and commercial standards
- Where space saving is important, very-thin-wall tubing allows you to pack components tightly

## MECHANICAL PROTECTION

Raychem tubing products provide mechanical protection to assure reliability of harnesses and terminations.

- Many tubing products offer excellent protection for cables and harnesses that are dragged along the ground, flexed frequently, or subjected to abrasion during installation
- HFT5000 heat-shrinkable fabric tubing and Versaflex expandable braided polyester tubing are designed to provide mechanical protection for components such as rubber hoses, plastic pipes, and harness wiring bundles
- Semirigid tubing products provide strain relief to ensure that delicate connections will be protected from damage during use

## ENVIRONMENTAL SEALING AND PROTECTION

High-shrink-ratio tubing products environmentally protect connector-to-cable transitions. The adhesives used in our dual wall tubing products bond to a wide variety of plastics, rubbers and metals.

- High shrink ratios accommodate large size differences between cables and cable connectors and backshells, thus simplifying cable repair
- Medium wall tubing is available for increased mechanical protection
- Other tubing products are available in flexible, semirigid, or flame-retardant materials

## PROTECTION FROM MOISTURE AND CORROSION

Adhesive-lined, flexible polyolefin tubing seals and protects electrical splices and in-line electronic components from fluids, moisture and corrosion. Rugged, adhesive-lined tubing protects wiring and components from the corrosive effects of moisture, engine fuels and lubricants.

- Tubing provides one-step electrical insulation and moisture sealing
- When adhesive-lined flexible polyolefin tubing is used both the tubing and adhesive are flexible, creating a moisture seal that accommodates bending
- In more rugged applications, specially formulated hot-melt adhesive forms an effective barrier against fluids and moisture
- The dimensions of some tubing products are engineered to accommodate multiple wire splices

## MECHANICAL AND ENVIRONMENTAL PROTECTION

Heat-shrinkable end caps fully encapsulate or seal terminations and protect them from dust, dirt, and moisture. The encapsulant or adhesive lining in the caps melts and flows to fill surface irregularities in the substrate.

- End caps inexpensively insulate and encapsulate or seal crimped electrical connections
- These caps resist abrasion, vibration and flexing
- End caps' splash resistant, moisture resistant coverings provide environmental protection

## PROTECTION FROM IMPACT AND ABRASION

Heavy duty tubing products were designed for applications where strength and durability are needed such as underground splice sealing, high ratio back end connector sealing, battery terminal insulation, and mechanical protection for wiring systems.

- Thick wall tubing is highly resistant to impact and abrasion and provides a high level of strain relief
- Flame-retardant and halogen-free tubing products are available
- Heavy duty tubing products are resistant to chemicals, moisture and oils
