

# AMP MCP 18P MONOBLOCK CONNECTOR

The AMP MCP 18P monoblock connector is constructed from flame-retardant UL 94 V-0 material and uses the common and widely-adopted AMP MCP 2.8 contact system. The new lever design offers a reduced mating force of below 75 N, which eases the assembly process - and there is an required secondary locking feature to aid with contact alignment. Four color codings are available, to reduce improper mating, and connectors fit within existing bulkhead cut-outs, meaning no design changes are required.
