

IDC Ribbon Cable with PVC Insulation

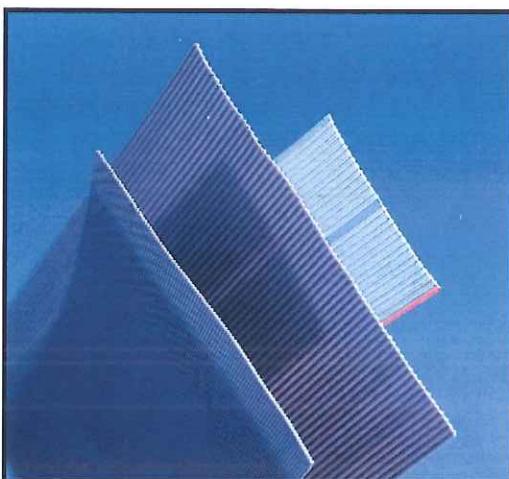

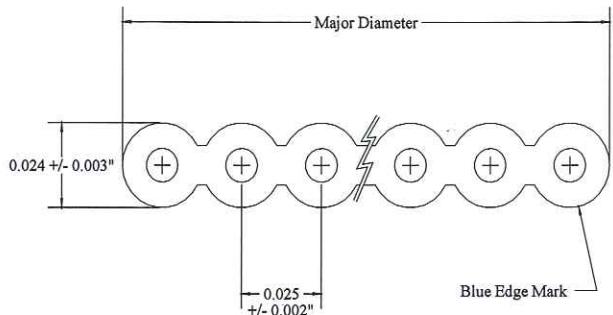

Applications: The TE/Madison Cable family of PVC insulated IDC Ribbon Cables utilize manufacturing processes that provide precise tolerances for mass termination. The same processes ensure consistent and reliable electrical performance while using low cost PVC insulating compounds. The PVC insulated family of cables is available in various center spacings of #30, #28, #26, #24, #22 and #18 AWG conductor sizes for a wide range of applications. The 0.025" center spacing cable delivers a high signal density allowing the use of a high performance cable that meets the specifications of miniaturization. The 1.0mm spacing cables are designed for the disk drive industry where the 2.0mm IDC connector is widely accepted, whereas the 0.050, 0.100, and the 0.156 spacing cables are used for general purpose electronic interconnect applications.

TE/Madison Cable's IDC Ribbon Cable, produced to precise tolerances with low-cost PVC insulation, delivers consistent electrical performance and economy in a wide range of general purpose applications.
